Protect People Assets:
Executive Guardian

Executive Guardian is a platform used to protect executives and people with highly sensitive access (HSA's) against losses, damage, injuries, and costs associated with unforeseen events. Businesses and individuals with Executive Guardian protect themselves against the uncertainties that cause financial as well as personal loss.

DISCOVER: EXECUTIVE GUARDIAN:

A tailored Intelligence platform that is completely independent of any other Risk IQ platform.
Executive Guardian automates discovery, and enables personal protection with threat attribution and expertise. Our team of former national security and intelligence officers—model internet and physical threats with precision focus on the enterprise's people: PII at-risk, social media fraud, harassment, impersonation, stock manipulation, email and account compromise.

WHAT WE PROVIDE:

• Web Portal and API Access
• Expert Support by RiskIQ i3 Analysts
• Social Media Impersonation Monitoring
• PII Monitoring
• Physical Threat Monitoring
• Personalized Risk and Vulnerability Reports

RiskIQ virtual users search for web content using a combination of threat feeds and configured search engine searches for brand keywords to encounter threats the same way real users targeted by them do.

THE SOLUTION:

Reduce PII Exposure and Physical Threat

RiskIQ virtual users covertly search for private information about highly sensitive-access (HSA’s) individuals in the same way that hackers do, but in an automated. Searches are based on a combination of known sites and general source-agnostic searches via search engines. A combination of virtual user crawling and integrations with intelligence platforms detects doxxing and physical threats made in social media posts and the open internet.

Detect Social Impersonation

RiskIQ detects social media profiles impersonating company executives or HSA employees in major social networks. Our process includes a combination of integrations with social networks’ public API’s and virtual user crawling mimicking the ways human users search social networks for user accounts. Recorded observations are stored and analyzed in our secured network, to generate events for suspicious profiles.
Reduce Threat To Corporate IT Infrastructure

RiskIQ leverages its Internet intelligence datasets and proprietary virtual user technology to automate and streamline the detection and monitoring of threats over time. RiskIQ enriches the observations captured by virtual users simulating human Internet users to discover, analyze, and interact with web content. We also tap other data sources with the intelligence gathered by the full RiskIQ platform to contextualize risks and prevent false positives.

**Threat Management and Mitigation**

Recurring automated monitoring of events with pending enforcement actions every 48 hours lets users know when threat content has been successfully taken down, and monitoring post-resolution automatically reopens events should any previously removed content come back up in the future.

SOLUTION OVERVIEW

With RiskIQ, enterprises safeguard digital strategies by discovering their assets outside the firewall and commanding the attack surface with global visibility and control.

No-Agent Sensor Network
identifies cloud infrastructure, apps and services, edge connections, full DOM extraction and human-web simulation

Connected Cloud Services
automated internet graphing, uncovering the global internet fabric—including third-parties, apps and services

Automated Change Detection
encoded detection logic and smart graphing across infrastructure, services, apps, code, and components

Pre-built Risk Indicators
readymade and custom metrics with statistical analysis across 200+ risk/threat indicators

Trusted Data Internet Fabric
enriched asset intelligence—open ports, hosts, pages, components, CVEs, and relationships

WHAT OUR CUSTOMERS SAY

“The additional insight RiskIQ provides, helps us protect the integrity of our global network and create a trusted environment for the people on our platform. RiskIQ helps detect and block threats planted in third-parties that violate our policies or put our people at risk.”
