Personalized Security Intelligence for Threats that Matter

Today’s enterprise attack surface is defined by nearly infinite attacker targets, diverse assets, and continuous expansion. Now, the internet itself is the new battleground, and the nature of this interconnected, entangled world allows adversaries to hide in plain sight.

But for most security teams, threat intelligence has a track record of irrelevance when it comes to real-world threats to their real-world attack surface. Today’s enterprise attack surface’s multi-layered composition requires dynamic, scalable, and sustainable threat intelligence relevant to every stitch of the organization’s digital footprint.

What now?

RiskIQ Illuminate is where cyber threats and your attack surface converge to see your digital relationships with everything else on the internet: real-time threats relevant to you. Combining more than ten years of real-world observations and trillions of relationships, RiskIQ Illuminate assembles, graphs, and identifies every dimension of your digital attack surface.

Now, you can uncover exposures, risks, and threats against your worldwide digital footprint and get meaningful intelligence tailored to you. With RiskIQ Illuminate, leverage continuous, zero-touch discovery to keep pace with changes and automatically score risks based on real-world observations related to your external attack surface.

Also enrich and empower downstream tools, systems, people, and workflows, including SOAR, SIEM, XDR, EDR, IPS, WAF, firewalls, and any other security tool—realizing the vision of continuous protection that keeps pace with digital growth.

Combat today’s internet-scale threat campaigns by scaling defense and future-proofing protections with actionable insights against threats today and those yet to be deployed.

Key Capabilities

- Worldwide Collection and Unified Graphing
- Tailored Attack Surface Intelligence
- Automated Discovery and Mapping
- Dynamic Risk and Reputation Scoring
- Global Threat Index and Identifiers
- On-demand Deep and Dark Web Search
- Layered Digital Footprinting and Change Detection

Key Benefits

- Prioritize risks relevant to you
- Speed up analysis, triage, and response
- Reduce risks inherent to digital change and expansion
- Gain precise visibility through every layer of the attack surface
- Enable durable protection at a global scale
PRIORITIZE RELEVANT THREATS
RiskIQ Illuminate is built on the foundation of RiskIQ’s patented infrastructure chaining technology and automated discovery. For more than a decade, RiskIQ’s global collection network—integrating passive and active techniques—extracted key indicators and identifiers of everything on the internet.

Having a unified global attack surface gives RiskIQ Illuminate the unique capability to identify, map, and monitor your digital footprint and your relationships to threats relevant to you.

ATTACK SURFACE INTELLIGENCE
Leveraging the foundation of more than ten years of internet tracking and graphing, RiskIQ Illuminate is the world’s only threat intelligence solution with attack surface intelligence. Identify and distinguish digital systems across the open and closed web—brands, infrastructure, third parties, dependencies, peers, industries, and the entire digital supply chain.

RiskIQ Illuminate continuously tracks and monitors your external attack surface, automatically detecting changes and dynamically scoring risks and reputations in real-time.

AUTOMATED DISCOVERY, SCALED PROTECTION
Security intelligence that combines attack surface insights with relevant observed threats makes security operations more efficient and effective to mitigate the volume of threats at the speed of digital growth.

RiskIQ Illuminate’s automated discovery enables you to maintain line-of-sight to the external attack surface as it grows, changes, and expands. Now, you can easily scale protection and realize elastic defenses that are fused with live insights for threats that matter to you, on-demand and moment-by-moment.

FASTER, SMARTER INCIDENT RESPONSE
The ever-increasing number of threats feeds on easy, universal access to malicious systems, kits, and infrastructure capable of effective cyberattacks that adversaries from even the best security professionals.

RiskIQ Illuminate enables you to rapidly identify adversary-threat infrastructure, regardless of the threat actor operating it, including threats yet to be deployed. By fingerprinting adversary-threat infrastructure, security teams can scale global defenses against a single threat actor or thousands with access to threat systems.
SECURITY INTELLIGENCE EMPOWERS GLOBAL PROTECTION

Digital, cloud-centric transformation creates hidden risks and threats for the extended enterprise—a fluid and entangled threat landscape reshaping security and risk strategies. However, it is challenging to see threats relevant to the global attack surface, which wastes time and energy while adversaries remain concealed.

Simply gathering intelligence from open sources or network telemetry and anti-malware is not enough to solve current security challenges. Unraveling what’s you from what is another; what’s good from what’s bad, and adversaries from allies require relevant, actionable intelligence to discern what’s real and important to you.

RiskIQ Illuminate is intelligence that empowers global defense.
