Faster, Smarter Incident Response

Actionable threat intelligence, mapped to you

THE CHALLENGE: Faster, Smarter Incident Response

A single incident may be only one of 100,000 digital assets relevant to the compromise. But security response teams struggle to validate a compromise is fully resolved—unable to assemble all the relevant intelligence to execute the right (and most relevant) response.

Identifying attackers and their infrastructure is nearly impossible without relevant security intelligence, that goes beyond open-source indicators. Often, intelligence is locked away in silos, outdated, irrelevant, or simply noise; making response teams perform manual data-stitching before analyzing before the first indicator.

Security programs are left unaware of adjacent attacks, relevant target assets, nearby threat actors, and chained compromises linger—remaining vigilant but never sure the attacker is gone.

Specific challenges include:

- Disconnected, incomplete data and intelligence
- Lack insight into attackers and their infrastructure
- Unable to map threats to enterprise attack surface
- Limited response scale but a larger digital footprint
- Outdated and irrelevant open-source intelligence

THE SOLUTION: Relevant Security and Threat Intelligence, Mapped to You

Security teams can speed up and improve incident response by fusing threat intelligence and investigations into their response workflows. RiskIQ unifies and scales internet datasets and delivers attack surface-aware threat intelligence with a 10-year history.

RiskIQ curates and corrects and updates open-source intelligence (OSINT), then adds proprietary security intelligence from RiskIQ Labs—combining attack surface mapping to give security teams focused response for the most relevant assets, threats and attacks.

With over 50 integrations—SIEM, SOAR, EDR, ITSM, VM—RiskIQ's security intelligence can be infused across the security ecosystem via simple and flexible APIs and apps. Enriched with relevant intelligence, security operations and response gets smarter and faster to keep pace with digital growth and changing threats.

WHY RISKIQ?

Infrastructure Chaining to identify attackers and their infrastructure relevant to threat activity

Adaptive Threat Indicators drawn from 10+ years of data history and 200 billion mapped relationships

Enriched OSINT easily accessible and actionable threat intelligence, curated and extended for relevance

Internet Intelligence Graph

RiskIQ is the only platform with relevant security and threat intelligence drawn IP and non-IP resources, hosts and host pairs, web components, WHOIS, certificates, subdomains, trackers, hashes, OSINT, PassiveDNS, cookies, and digital footprints. Threat intelligence mapped to the digital attack surface.

SOLUTION OVERVIEW

Security intelligence enriches every decision, workflow, playbook and response protocol so you can be more confident to eliminate threats at-scale.

Attacker Attribution

identifies attack infrastructure and tools, seeing who's targeting you and the systems they use

Pre-Built Threat Indicators

intuitive, flexible UI simplifies threat analysis: adaptive watchlists to go from insights to action in just a few clicks

Live, Always-on Intelligence

with more than 4,000 open-source (OSINT) indicators and articles, curated and continuously updated to remove noise and spotlight the signal.

Smarter Security Ecosystem

easily infuse threat intelligence to your network, endpoint, SOAR/SIEM solutions via API and 50+ vendor integrations

WHAT OUR CUSTOMERS SAY

"RiskIQ helps us protect the integrity of our global network and create a trusted environment for the customers who need safe online banking. In addition to improving our internal threat programs, RiskIQ helps protect our customers from cyber threats throughout the connected ecosystem—detecting and stopping threats in third-parties that put our customers at risk."
